INSTRUCTIONS FOR TECHNICAL SETUP

After a short connection process, and after host lets you in, you will be able to see and hear the remote video and audio from the conference.

It is important to be connected 10 minutes before the start of the chosen panel discussion.

Your webcam level should be at the level of your eyes or slightly higher. **Most people's webcam is placed too low, which is not the best angle. If needed use few books to lift your laptop.*

Your background is not that important, as long as it's not distracting for other participants. Ideally, you should set soft, indirect light in front of yourself, and minimize any background lighting (window or any other light source).

For example, place a light with a lampshade in front of you and behind your webcam. Finally, we will sometimes add graphical layers above your picture. Having that in mind, you should not be too close to the camera, so the graphical layers would not cover your face.

Last but not least, timings given are GMT +02:00 Belgrade, Bratislava, and Ljubljana. Please make sure to compare your time zone to GMT +02:00 and please plan accordingly.
